
CALLING ALL GREEN HOME OWNER-WANNABEES!
*Angels Log Homes Inc is looking for someone interested
in building a prototype **Green Log Home!***

This house will feature:

- Passive solar design and site placement.
- Maximum 1000 square feet on the main floor.
- Handcrafted log walls on the main, according to our rigid specifications, craftsmanship, and material use (including sheep's wool insulation).
- Instead of building up for a second floor, the basement walls will be raised 4 feet above ground (significantly reducing cost to you) using Insulated Concrete Forms (ICF), allowing the insertion of full-size windows, making a daylight basement.
- A roof system made of pre-fabricated roof trusses (dramatically reducing your cost).
- A metal roof (optimal for rain water collection and very long-lasting).
- Rain water cistern.
- All windows in home are ENERGY STAR labeled.
- Interior finishes that have no VOCs.
- Flooring materials chosen from bamboo laminate, Marmoleum linoleum, FSC certified wood flooring, or recycled wood flooring.
- Off-grid heat source, water heating and electrical, according to site restrictions.
- Composting toilet.
- Sustainable landscape design to aid in cooling in summer, and to reduce wind in winter.

**If this sounds like the house of your dreams,
contact Dave Dorish at 780-686-1685
and let's get at 'er!**
